

SANYO MODULES = MORE KWH PER RATED STC WATT

Sanyo modules maintain higher voltages at higher temperatures which means more energy production. High efficiency HIT technology produces more energy per rated watt.

- Approximately 5% more energy than other crystalline modules of similar wattage
- A higher PTC rating per rated STC watt may mean higher rebates in states where the rebates are based on the PTC rating
- More power per square foot = less installation space required

You Get What You Pay For

SunWize procures Sanyo modules under a 'Minimum Lot Warranty' agreement. This agreement provides that, at the time of purchase, no single module under 200W (or 190W or 195W if applicable) will be supplied to SunWize. When you buy a 200-watt Sanyo module from SunWize, it produces a minimum of 200 watts under STC conditions. So, you get what you pay for.

See For Yourself

All Sanyo modules from SunWize are individually tested by Sanyo's automated flash testing equipment. The resulting module output performance information is available to our customers. Simply provide the serial numbers of the modules you purchased and we will send you the test data.

SunWize® Grid-Tie Systems Rely on Sanyo Modules

That's why SunWize Grid-Tie Systems rely on Sanyo modules. SunWize systems are recognized for quality nationwide and many installers are finding that the comprehensive engineered documentation speeds the permitting and inspection process. Why shop around for separate components when you can have a complete system delivered to the job site? Many models available, call your representative for more information.

Reliable People...Reliable Products...Reliable Power!
